

Joshua Yorko

ADVISOR APPLICATION DEVELOPER · BACKEND & PLATFORM ENGINEER

Worcester, MA

☎ (+1) 260-443-8425 | ✉ joshua.yorko@gmail.com | 🌐 joshyorko | 📧 joshua-yorko-560103a9

“Senior backend and platform engineer turning messy business processes into reliable APIs, data pipelines, automation, and AI-enabled operational tooling.”

Skills

Languages	Python, Ruby/Rails, SQL, JavaScript/TypeScript, Bash, Go
AI & LLM Systems	RAG, embeddings, vector search, tool-using agents, Amazon Bedrock, Claude/Titan integrations
Platform & Cloud	Kubernetes, Rancher, k3s, Docker, Dev Containers, AWS ECS/Fargate, EKS, Argo CD/GitOps
Backend & APIs	FastAPI, Rails, Django, REST APIs, PostgreSQL services, integrations, runbooks
Data Engineering	PostgreSQL, SQL Server, MongoDB, SQLite, DuckDB, pandas, Spark, Iceberg, Dremio, Nessie
Automation & RPA	Robocorp/RCC, UiPath ecosystem, Playwright, API-first automation, CI/CD robots
DevOps & Supply Chain	GitHub Actions, Terraform, Helm, SBOMs, Cosign/signing, multi-arch containers

Experience

Gainwell Technologies, Conway, AR

ADVISOR APPLICATION DEVELOPER — BACKEND, DATA & PLATFORM ENGINEERING

June 2023 – Present

- Promoted into an advisor-level application development role focused on production internal systems, backend APIs, data pipelines, platform automation, and business-team operational tooling.
- Designed, built, and maintained the Images API, a production service used daily by dental adjudicators to retrieve claim images from legacy clearinghouse sources; improved reliability, maintainability, and process visibility for [daily users] and [daily image volume].
- Built Gabby Call Intents analysis workflows over embedded IVR call transcripts, using RAG-style retrieval, similarity search, and multi-turn tool-using agents to surface containment-breakdown insights for operations teams.
- Aggregated operational reports and SQL data pipelines to support adjudicator workload balancing, load visibility, and process reporting across [team/process scope].
- Modernized automation around the UiPath/RPA ecosystem with Python, Playwright, API-first integrations, runbooks, SOPs, and monitoring concepts to reduce manual toil by [manual hours reduced].
- Prototyped Kubernetes/GitHub Actions runner patterns for scalable automation workloads, including custom runner images, deterministic environments, and CI/CD robot execution concepts.
- Integrated LLMs through Amazon Bedrock-style workflows for analytics and triage use cases while keeping production claims about pilots and proposals explicitly bounded.
- Delivered cloud-native services and data platforms with FastAPI, PostgreSQL, S3, Terraform, Docker, Kubernetes/EKS concepts, Dremio, Nessie, Apache Iceberg, and Python work-distribution algorithms.

Gainwell Technologies, Conway, AR

SENIOR DATA ENGINEER/SOFTWARE ENGINEER

June 2022 – March 2023

- Architected an enterprise-level data lake utilizing AWS Glue, Amazon S3, PySpark, Hadoop, Python, and PostgreSQL, significantly boosting data processing efficiency.
- Integrated the data lake with Amazon RDS via SQL views for a Django frontend, enabling seamless data access and manipulation.
- Automated complex data retrieval using Python libraries (Requests, aiohttp, asyncio, Selenium, BeautifulSoup), enhancing data acquisition speed and reliability.
- Developed real-time dashboards in PowerBI and custom visualizations using Plotly and Django, delivering insightful data analytics to stakeholders.
- Ensured high availability and scalability of web applications hosted on Amazon EC2.
- Implemented robust security measures, including SSL encryption and firewalls, to safeguard data and applications.
- Proactively monitored applications and infrastructure, minimizing downtime and maximizing operational reliability.

Lambent Spaces, Boston, MA

IMPLEMENTATIONS SPECIALIST

March 2021 – October 2022

- Directed software implementations, ensuring customer requirements were met through effective network and system configurations.
- Optimized deployment processes, resulting in heightened efficiency and improved customer satisfaction.
- Fostered collaboration with cross-functional teams to refine deployment workflows and procedures.
- Authored and utilized SQL and Python scripts for automation and efficient problem resolution.

CVS HEALTH, Cumberland, RI

DATA ANALYST (DESKTOP SUPPORT)

May 2019 – March 2021

- Designed and deployed O365 Apps for Enterprise across 80k devices, leveraging Python and Excel for efficient reporting and achieving a 30% increase in deployment efficiency.
- Created and maintained business-focused reports using Dash/Plotly, SharePoint, and Excel, driving informed decision-making processes.
- Conducted extensive data normalization from SCCM and Active Directory, ensuring data accuracy and consistency.
- Played a pivotal role in Windows 10 Enterprise Migration, focusing on rigorous testing and quality assurance of developed reports.

SPENCER TECHNOLOGIES, Medway, MA

CLIENT ONBOARDING SPECIALIST

Jan 2017 – Apr 2019

- Implemented the Smartsheet Request Management System, resulting in annual cost savings of \$16k.
- Successfully onboarded new business ventures worth over \$15 million, enhancing company growth and market presence.
- Developed and executed project plans for multiple IT projects, leading teams to successful and timely client launches.

Education

Indiana State University

Terre Haute, IN

B.A. IN ENGLISH

Aug 2006 – June 2008

Selected Projects

Selected open-source and personal technical work

AI AUTOMATION & PLATFORM SYSTEMS

June 2023 – Present

- **joshyorko/rcc**: Apache-2.0 community fork of Robocorp RCC; builds and releases RCC binaries and demonstrates runtime/tooling depth for reproducible automation environments.
- **yorko-io/control-room**: self-hostable Robocorp-style orchestration platform for work item queues, assets, RCC/Holotree integration, Kubernetes/Helm runtime concepts, and operator-style delivery.
- **Fizzy/Symphony/Codex orchestration**: board-driven agent workflows, worktrees, spec-first automation, and operational handoffs for multi-agent engineering work.

Automation Infrastructure

KUBERNETES, DEV CONTAINERS & RUNTIME TOOLING

June 2023 – Present

- Built custom **ARC (Actions Runner Controller)** Docker images with prebuilt Holotree environments for repeatable automation execution and rapid Kubernetes scale-out.
- Standardized reproducible developer and robot runtimes with **Dev Containers**, Docker, and RCC-compatible environment bootstraps.
- Integrated remote execution and debugging flows for browser automation, Playwright workers, and API-first robots.
- Designed file-adapter work items, file sharding, and matrix job sharding patterns to spread workload across self-hosted runners without requiring Redis.

Open Source Contributions

AUTOMATION TOOLS & PLATFORMS

June 2023 – Present

- **RCC**: Apache-2.0 community fork and build/release workflow for reproducible RPA runtime binaries (github.com/joshyorko/rcc).
- **control-room**: self-hostable orchestration/control-room platform exploring work item queues, assets, RCC/Holotree runtime management, Kubernetes, Helm, and operator concepts (github.com/yorko-io/control-room).
- **room-of-requirement**: reproducible Dev Container and Holotree environment scaffolding for portable automation workspaces (github.com/joshyorko/room-of-requirement).
- **arc-runner-custom-docker**: custom ARC runner images for Playwright, RCC, and Kubernetes-backed automation workloads (github.com/yorko-io/arc-runner-custom-docker).
